# ENTERPRISE SUITE

Dynamic Application For Internet

With the evolution and increasing interrelation between ERP, MRP and Industrial Specific Management tools, Smartlab was challenged to embark on an aggressive project to re-develop and redesign the overall Enterprise Business Suite structure in order to include more functions and intelligence, required by today's business leaders.

## WEB APPLICATION MODULES

As each of the applications are designed from ground up to run in the Web environment, they inherently inherit advantages by-design, such as lower infrastructure cost, increased accessibility and other advantages which will ultimately benefit you, as the customer.

The Enterprise Suite for Workplace, specifically designed by Smartlab, also provides an integrated and conducive working experience which ultimately improves productivity of your workforce.

This finally led to the development of the Enterprise Suite for Workplace. Having the advantage to redesign the platform on a clean sheet of paper, Smartlab was able to include many new design concepts from ground up, which others can only achieve through "system-patch" concept.

Enterprise Suite for Workplace is more than just a Business Suite portal, in fact it is a complete set of business applications that enables your business to efficiently manage customer interactions, services, manufacture products, ship orders, collect payments and more – all this from a enterprise suite with each module independently scalable, with its own portal and yet easily integratable with other modules in a user friendly

## INDUSTRIAL SOLUTIONS

Every company is different in terms of its business. Although the fundamental business core administration may be similar in nature, the business management part is specific to the type of industry the organization belongs to.

In order to complement and complete the Enterprise Suit, some of the common Industrial Solution Modules shown below are being implemented.

Depending on the business structure, the Specific Industry Module is designed with the intention to work coherently with the other business core modules, in order to provide customers the best overall Enterprise Suite for each specific business administration system.

## LOGICAL MODULES

Enterprise Suite for Workplace consists of the main modules, as shown below.

Each module have individual portals, where applications are each independently scalable, customizable; and when integrated in the Enterprise Suite for Workplace environment, they integrate seamlessly.

Any of these specific business core modules can be easily modified to meet the nature of business of your company.
